Something has changed in the culture and values of academic science over the last quarter-century. University science is now entangled with entrepreneurship, and researchers with a commercial interest are caught in an ethical quandary. Science in the Private Interest investigates the trends and effects of modern, commercialized academic science. This book dives unhesitatingly into some of modern science's messiest and most urgent questions. How did scientists begin choosing proprietary gain over the pursuit of knowledge? What effects have academic-corporate partnerships had on the quality and integrity of science? And, most importantly, how does this affect the public?
