Deep Learning in Introductory Physics (Science & Engineering Education Sources)

Mark J. Lattery

Deep Learning in Introductory Physics (Science & Engineering Education Sources) Mark J. Lattery Deep Learning in Introductory Physics: Exploratory Studies of Model?Based Reasoning is concerned with the broad question of how students learn physics in a model?centered classroom. The diverse, creative, and sometimes unexpected ways students construct models, and deal with intellectual conflict, provide valuable insights into student learning and cast a new vision for physics teaching. This book is the first publication in several years to thoroughly address the “coherence versus fragmentation” debate in science education, and the first to advance and explore the hypothesis that deep science learning is regressive and revolutionary. Deep Learning in Introductory Physics also contributes to a growing literature on the use of history and philosophy of science to confront difficult theoretical and practical issues in science teaching, and addresses current international concern over the state of science education and appropriate standards for science teaching and learning.

The book is divided into three parts. Part I introduces the framework, agenda, and educational context of the book. An initial study of student modeling raises a number of questions about the nature and goals of physics education. Part II presents the results of four exploratory case studies. These studies reproduce the results of Part I with a more diverse sample of students; under new conditions (a public debate, peer discussions, and group interviews); and with new research prompts (model?building software, bridging tasks, and elicitation strategies). Part III significantly advances the emergent themes of Parts I and II through historical analysis and a review of physics education research.

ENDORSEMENTS:
"In *Deep Learning in Introductory Physics*, Lattery describes his extremely innovative course in which students' ideas about motion are elicited, evaluated with peers, and revised through experiment and discussion. The reader can see the students' deep engagement in constructive scientific modeling, while students deal with counter-intuitive ideas about motion that challenged Galileo in many of the same ways. Lattery captures students engaging in scientific thinking skills, and building difficult conceptual understandings at the same time. This is the 'double outcome' that many science educators have been searching for. The case studies provide inspiring examples of innovative course design, student sensemaking and reasoning, and deep conceptual change."

~ **John Clement**, *University of Massachusetts—Amherst, Scientific Reasoning Research Institute*

"*Deep Learning in Introductory Physics* is an extraordinary book and an important intellectual achievement in many senses. It offers new perspectives on science education that will be of interest to practitioners, to education researchers, as well as to philosophers and historians of science. Lattery combines insights into model-based thinking with instructive examples from the history of science, such as Galileo’s struggles with understanding accelerated motion, to introduce new ways of teaching science. The book is based on first-hand experiences with innovative teaching methods, reporting student’s ideas and discussions about motion as an illustration of how modeling and model-building can help understanding science. Its lively descriptions of these experiences and its concise presentations of insights backed by a rich literature on education, cognitive science, and the history and philosophy of science make it a great read for everybody interested in how models shape thinking processes."

~ **Dr. Jürgen Renn**, *Director, Max Planck Institute for the History of Science*

From reader reviews:

Bobby Bagwell:

What do you concentrate on book? It is just for students as they are still students or the idea for all people in the world, what best subject for that? Only you can be answered for that concern above. Every person has various personality and hobby for every other. Don't to be forced someone or something that they don't want do that. You must know how great and important the book Deep Learning in Introductory Physics (Science & Engineering Education Sources). All type of book can you see on many methods. You can look for the internet options or other social media.

Bernadine Williams:

Playing with family in a park, coming to see the water world or hanging out with close friends is thing that usually you have done when you have spare time, subsequently why you don't try thing that really opposite from that. Just one activity that make you not sense tired but still relaxing, trilling like on roller coaster you have been ride on and with addition details. Even you love Deep Learning in Introductory Physics (Science & Engineering Education Sources), you may enjoy both. It is excellent combination right, you still desire to miss it? What kind of hangout type is it? Oh can happen its mind hangout guys. What? Still don't have it, oh come on its identified as reading friends.

Jeannine Lawson:

The book untitled Deep Learning in Introductory Physics (Science & Engineering Education Sources) contain a lot of information on the idea. The writer explains your ex idea with easy means. The language is very easy to understand all the people, so do certainly not worry, you can easy to read this. The book was compiled by famous author. The author brings you in the new period of time of literary works. It is easy to read this book because you can please read on your smart phone, or program, so you can read the book within anywhere and anytime. If you want to buy the e-book, you can start their official web-site in addition to order it. Have a nice examine.

Jeff Weaver:

With this era which is the greater man or woman or who has ability to do something more are more special than other. Do you want to become considered one of it? It is just simple method to have that. What you must do is just spending your time almost no but quite enough to possess a look at some books. Among the books in the top listing in your reading list will be Deep Learning in Introductory Physics (Science & Engineering Education Sources). This book and that is qualified as The Hungry Inclines can get you closer in turning out to be precious person. By looking way up and review this guide you can get many advantages.
