Biotransformation of Waste Biomass into High Value Biochemicals

Biotransformation of Waste Biomass into High Value Biochemicals
Agro-industrial wastes are end-products emerging after industrial processing operations and also from their treatment and disposal e.g. solid fruit wastes and sludge. The agro-industrial wastes are often present in multiphase and comprise multicomponent. Nevertheless, these wastes are a goldmine as they possess valuable organic matter which can be diverted towards high value products ranging from polymers to antibiotics to platform chemicals. There have been plenty of books published on bioenergy, enzymes and organic acids, among others. However, this emerging field of *biochemical has not yet been covered so far which is an important entity of the biorefinery model from waste biomass* and needs to be understood from fundamental, applied as well as commercial perspective which has been laid out in this book.
