System Level Design with Rosetta (Systems on Silicon) Perry Alexander
The steady and unabated increase in the capacity of silicon has brought the semiconductor industry to a watershed challenge. Now a single chip can integrate a radio transceiver, a network interface, multimedia functions, all the "glue" needed to hold it together as well as a design that allows the hardware and software to be reconfigured for future applications. Such complex heterogeneous systems demand a different design methodology. A consortium of industrial and government labs have created a new language and a new design methodology to support this effort. Rosetta permits designers to specify requirements and constraints independent of their low level implementation and to integrate the designs of domains as distinct as digital and analog electronics, and the mechanical, optical, fluidic and thermal subsystems with which they interact.

In this book, Perry Alexander, one of the developers of Rosetta, provides a tutorial introduction to the language and the system-level design methodology it was designed to support.

* The first commercially published book on this system-level design language

* Teaches you all you need to know on how to specify, define, and generate models in Rosetta

* A presentation of complete case studies analyzing design trade-offs for power consumption, security requirements in a networking environment, and constraints for hardware/software co-design

From reader reviews:

Travis Berry:

Do you have favorite book? If you have, what is your favorite's book? Reserve is very important thing for us to understand everything in the world. Each publication has different aim or perhaps goal; it means that book has different type. Some people really feel enjoy to spend their a chance to read a book. These are reading whatever they consider because their hobby is definitely reading a book. Why not the person who don't like examining a book? Sometime, individual feel need book whenever they found difficult problem or maybe exercise. Well, probably you will need this System Level Design with Rosetta (Systems on Silicon).

Troy Cochran:

What do you ponder on book? It is just for students because they're still students or this for all people in the world, what the best subject for that? Merely you can be answered for that problem above. Every person has diverse personality and hobby for every other. Don't to be compelled someone or something that they don't want do that. You must know how great along with important the book System Level Design with Rosetta (Systems on Silicon). All type of book would you see on many sources. You can look for the internet resources or other social media.

Robert Lewis:

In this 21st centuries, people become competitive in every way. By being competitive right now, people have do something to make all of them survives, being in the middle of the particular crowded place and notice by means of surrounding. One thing that oftentimes many people have underestimated this for a while is reading. Yeah, by reading a book your ability to survive boost then having chance to remain than other is high. In your case who want to start reading some sort of book, we give you this System Level Design with Rosetta (Systems on Silicon) book as nice and daily reading publication. Why, because this book is usually more than just a book.

Robert Howard:

Playing with family inside a park, coming to see the sea world or hanging out with pals is thing that usually you may have done when you have spare time, and then why you don't try point that really opposite from that. Just one activity that make you not sensation tired but still relaxing, trilling like on roller coaster you have been ride on and with addition associated with. Even you love System Level Design with Rosetta (Systems on Silicon), it is possible to enjoy both. It is very good combination right, you still wish to miss it? What kind of hang type is it? Oh seriously its mind hangout folks. What? Still don't understand it, oh come on its known as reading friends.
